

## Tentative Program (as of 06/04/2025)

	Tuesday April 08, 2025 (Plenary session)	
08:00-08:45	Registration	
08:45-09:15	Opening Ceremony	
09:15-10:00	Gerbrand Ceder (Berkeley University of California, USA)	Р
	Al and autonomous laboratories for materials synthesis	
10:00-11:00	Coffee Break / Poster Session / Exhibition	
11:00-11:10	Wide Hogenhout (European Commission, Belgium)	- 1
	European digital infrastructure for advanced materials	
11:10-11:20	Paolo Bondavalli (European Innovation Council, Belgium)	- 1
	Al and advanced materials at EIC	
11:20-11:30	Tejs Vegge (Technical University of Denmark, Denmark)	I
	Getting better materials faster with ML – a question of representation and distributed platforms	
11:30-11:40	Natalia Alexandra Konchakova (HEREON, Germany)	ı
	To Support Digital Maturity of Advanced Materials Communities	
11:40-11:50	Elisa Molinari (Università degli Studi di Modena e Reggio Emilia, Italy)	ı
44 50 42 00	Community codes at the exascale for advanced materials	
11:50-12:00	Elena Novoselova (Constructor Group, Germany)	I
42.00 42.00	Constructor Tech: an enabling AI Platform for Innovation	
12:00-13:00	Round Table: Towards a unified AI framework - methodological and infrastructural	
	perspectives for EU  No devices Standard (ICDEA (IC	
13:00-14:00	Moderators: <b>Stephan Roche</b> (ICREA/ICN2, Spain) & <b>Elena Novoselova</b> (Constructor Group, Germany)	
14:00-14:30	Cocktail Lunch (offered by AI4AM2025 organisers) Poster Session 1 / Exhibition	
14:30-14:30	Constructor Tech Workshop: Transforming research - intelligent workflows for modern science	
14.50-15.15	Stephan Roche (ICREA/ICN2, Spain)	
	Intelligent workflows for designing innovative advanced materials	
	Andrei Voicu Tomut (ICN2, Spain)	
	Demonstration of Scientific Workflow Applied to Disordered Quantum Materials	
15:15-15:45	Kristin Persson (Berkeley Lab, USA)	Κ
	Data-Driven Materials Design and Synthesis	
15:45-16:15	Yousung Jung (Seoul National University, South Korea)	Κ
	Data-Enabled Synthesis Predictions for Molecules and Materials	
16:15-17:00	Coffee Break / Poster Session / Exhibition	
17:00-17:15	Piero Altoe (NVIDIA, Italy)	0
	Revolutionizing AI-Driven Material Discovery Using NVIDIA ALCHEMI	
17:15-17:30	Ignacio Fernández Graña (Pasqal, France)	0
	Material Discovery with Quantum-Enhanced Machine Learning Algorithms	
17:30-17:45	Elmar Bonaccurso (Airbus Central R&T, Germany)	0
	Aircraft Paint System Optimization Workflow using a Combination of deterministic and	
	data-driven Tools	
17:45-18:00	Martin Siron (Entalpic AI, France)	0
	Addressing data quality issues and redundancies across chemistry databases for building	
	better datasets for materials discovery: LeMat-Bulk	
18:00-18:20	Anatole von Lilienfeld (University of Toronto, Canada)	I
	The magnificent 7: Simple rules for more efficient quantum machine learning in chemical	
20.20	space	
20:30	CONFERENCE DINNER  Postourent PETRITECI SACARDOTE	
	Restaurant PETRITEGI SAGARDOTE	
	Petritegi Bidea, 8; Astigarraga, 20115, Gipuzkoa - more info	
	Google Maps - Shuttle transfer info to be provided onsite	

	Wednesday April 09, 2025 (Plenary session)	
09:00-09:15	Jesús Oroya (Advanced Material Simulation, Spain)	0
	Optimizing AI-Enhanced Neural Network Subroutines for Plasticity in FEM	
09:15-09:30	Luis Martín-Moreno (Instituto de Nanociencia y Materiales de Aragón, Spain)	0
	A Neural Network architecture for data-driven symmetry discovery and inverse design,	
00:30 00:45	with application to twistoptics	0
09:30-09:45	Sergio Lucarini (BCMaterials, Spain)	0
	Physics-informed neural networks for coupled Allen-Cahn and Cahn-Hilliard phase field problems	
09:45-10:05	Andrey Ustyuzhanin (Constructor University, Germany)	1
05.45 10.05	Novelty-Generating Materials as a Substrate for Open-Ended Computation	'
10:05-10:20	Evgeny Blokhin (Tilde MI & Materials Platform for Data Science, Estonia)	0
	Materials Platform for Data Science: A 10 Years Success Story	
10:20-10:35	Jörg Schaarschmidt (Karlsruhe Institute of Technology, Germany)	0
	Advancing Digital Workflows in Material Science: Integrating AI into scientific workflows	
	with the Material Digital Initiative	
10:35-11:35	Coffee Break / Poster Session / Exhibition	
11:35-11:55	Miguel Caro (Aalto University, Finland)	I
	Predicting the atomic-scale structure of disordered materials with machine-learning	
44.55 42.45	potentials and experimental constraints	
11:55-12:15	Silvana Botti (Ruhr University Bochum, Germany)	ı
12:15-12:30	Computational materials science with machine learning: from data to insights <b>Leonardo Medrano Sandonas</b> (Dresden University of Technology, Germany)	0
12.15-12.50	Advancing machine learning for organic material simulations with quantum accuracy	U
12:30-12:50	Sanggyu Chong (EPFL, Switzerland)	1
	Machine learning you can trust	·
Wedne	esday April 09, 2025 (Advanced Materials Program in Spain - AM@ESP)	
09:00-09:15	Ricardo Diez Muiño (DIPC & Ikerbasque, Spain)	
	Brief overview of the "Complementary R&D&I Plan for Advanced Materials" in Spain	
09:15-09:40	Jordi Arbiol (Institut Català de Nanociència i Nanotecnologia ICN2, Spain)	1
	Automated Atomic Scale Data Analysis and Modelling for (Scanning) Transmission	
	Electron Microscopy	
09:40-10:05	María Carmen Asensio (Universidad de Valencia, Spain)	I
	Accelerating Advanced Energy Materials Discovery with AI and Modern Characterization	
10:05-10:30	Tools	
10.03-10.30	Irene García Camacha (Universidad de Castilla - La Mancha, Spain) Optimizing Hydrogel Synthesis for Customized Applications: An Interactive App for	ı
	Practitioners	
10:35-11:40	Coffee Break / Poster Session / Exhibition	
11:40-12:05	Maciej Haranczyk (IMDEA Materials, Spain)	T
	From Simulation to Autonomous Laboratory Preparation: ML-Driven Discovery of Porous	
	Materials and Their Composites	
12:05-12:30	Luis Martín-Moreno (Instituto de Nanociencia y Materiales de Aragón, Spain)	I
	Overview of the use of AI for Material Science at INMA.	
12:30-12:55	Pablo Piaggi (CIC nanoGUNE, Spain)	ı
12.50 14.00	Understanding crystallization with atomistic machine learning and simulation	
12:50-14:00 14:00-14:30	Cocktail Lunch (offered by AI4AM2025 organisers)	
14.00-14.30	Poster Session 2 / Exhibition  Parallel Session - PhD Students I	
14:30-14:40	Mojan Omidvar (Queen mary univeristy of london, UK)	0
	Accelerated Discovery of Perovskite Solid Solutions through unsupervised material	_
	,	
	fingerprints and Automated Materials Synthesis	
14:40-14:50	Kevin Alhada-Lahbabi (INSA Lyon, France)	0
14:40-14:50	- ,	0

14:50-15:00	Irea Mosquera-Lois (Imperial College London, UK)	0
15:00-15:10	Machine learning force fields for accurate defect calculations  Onurcan Kaya (Catalan Institute of Nanoscience and Nanotechnology, Spain)  Revealing Structure-Property Relationships in Amorphous Boron Nitride Using Machine- Learned Potentials	0
15:10-15:20	Lukas Volkmer (University of Technology Dresden, Germany)  Towards a data-driven multiscale framework for quantum-mechanical investigation of elastic properties of Al-Mg-Zr alloys	0
15:20-15:30	Danish Khan (University of Toronto, Canada)  Adapting hybrid density functionals with machine learning	0
15:30-15:40	Michael Alejandro Hernandez Bertran (Istituto Nanoscienze, Consiglio Nazionale delle Ricerche CNR, Italy) Automated Workflows and Machine Learning models for X-ray spectra simulations: applications to Li-ion battery materials	0
15:40-15:50	Adam Coxson (University of Liverpool, UK) Deep Learning the Fock Matrix in the Atomic Orbital Basis for extended $\pi$ -conjugated molecules within a Self-Consistent Framework	0
	Parallel Session - PhD Students II	
14:30-14:40	Ge Lei (Imperial College London, UK)	0
14:40-14:50	Unveiling 3D Geometries in LLMs: The Representation and Recall of Periodic Elements <b>Sebastian Roca-Jerat</b> (Instituto de Nanociencia y Materiales de Aragón (CSIC-Universidad de Zaragoza), Spain)	0
14:50-15:00	Neural-network wave functions for quantum many-body problems  Amir Dahari (Imperial College London, UK)  Prediction of microstructural representativity from a single image	0
15:00-15:10	Pol Sanz (Institute of Chemical Research of Catalonia (ICIQ), Spain) Optimizing Active Learning Strategies for Neural Network Potentials in Catalyst Characterization Workflows	0
15:10-15:20	Héctor Lobato (Leartiker, Spain) Smart Design of Thermoplastic Vulcanizate Products: Linking Process to Performance via Machine Learning	0
15:20-15:30	Adrien Moncomble (Université Paris Cité - MPQ, France) aquaDenoising: AI-Enhancement of in situ Liquid Phase STEM Video for Automated Quantification of Nanoparticles Growth	0
15:30-15:40	Sara Navarro (Catalan Institute of Nanoscience and Nanotechnology, Spain) Developing Accurate Exchange-Correlation Functionals through Physics-Informed Machine	0
15:40-15:50	Learning  Pedro Julián Delgado Galindo (IFMIF-DONES España, Spain)  Modelling of complex Fe-C systems for radiation applications with MLIAPs	0
15:50-16:20	Coffee Break / Poster Session / Exhibition	
	Parallel Session – Seniors I	
16:20-16:35	Daniel Araya Matilla (Advanced Material Simulation, Spain)	0
16:35-16:50	Al-Enhanced Hybrid Modeling for Optimizing Polymeric Yarn Manufacturing Processes  Clara Kirkvold (University of Birmingham, UK)  Leveraging reticular chemistry to develop topology-informed descriptors of nanoporous	0
16:50-17:05	materials  Cristiano Malica (University of Bremen, Germany)  Teaching oxidation states to neural networks	0
17:05-17:20	Ivan Infante (BCMaterials, Spain)  Advancing Quantum Dot Simulations: from DFT insights to Machine Learning	0
17:20-17:35	Yuting Li (Khalifa University, United Arab Emirates)  Machine Learning Assisted Discovery of Materials for Hydrogen Energy	0
17:35-17:50	Ivor Lončarić (Rudjer Boskovic Institute, Croatia (Hrvatska))  Modeling Molecular Crystals with Machine Learning Interatomic Potentials	0
17:50-18:05	Jose Ignacio Aizpurua (University of the Basque Country, Spain)	0

18:05-18:20 18:20-18:35	Physics Informed Neural Networks for Thermal Insulation Material Ageing Estimation  Sai Gautam Gopalakrishnan (Indian Institute of Science, India)  Optimal transfer learning strategies for predicting material properties  Evgeniya Kabliman (University of Bremen / Leibniz Institute for Materials Engineering – IWT, Germany)  Symbolic regression in material science and engineering	0
	Parallel Session – Seniors II	
16:20-16:35	Davide Tisi (EPFL, Switzerland)	0
_00	Transport mechanism of solid-state electrolytes via machine learning potentials at hybrid DFT level	Ü
16:35-16:50	<b>Lucas Garcia Verga</b> (Imperial College London, UK) Combining DFT and Machine Learning to Enhance the Screening of Oxygen Evolution Reaction Catalysts	0
16:50-17:05	Jürgen Spitaler (Materials Center Leoben Forschung GmbH, Austria) Active learning-based optimization of bainit steels based on probabilistic hybrid modelling	0
17:05-17:20	Özlem Özcan Sandikcioglu (Federal Institute for Materials Research and Testing (BAM), Germany)	0
17:20-17:35	Autonomous exploration of new alloy chemistries using a Material Acceleration Platform (MAP) <b>Sven Rogge</b> (Center for Molecular Modeling, Ghent University, Belgium)  Exploring the opportunities in strain engineering: from introducing flexibility in rigid MOFs to classifying elusive amorphous states	0
17:35-17:50	Ask Hjorth Larsen (CAMD, Technical University of Denmark, Denmark) Automated high-throughput computational workflows with Taskblaster	0
17:50-18:05	Jose Marquez Prieto (Humboldt University of Berlin, Germany) NOMAD: A Distributed Platform for FAIR and AI-Ready Solar Cell Research	0
18:05-18:20	<b>Tilmann Hickel</b> (BAM Federal Institute for Materials Research and Testing, Germany)  Data-driven design of hydrogen solubilities in metallic alloys	0
18:20-18:35	Binh Duong Nguyen (Forschungszentrum Juelich GmbH, Germany)  Machine learning for automated categorizing various defect types in KOH-etched microscopy images of 4H-SiC wafers	0
	Wednesday April 09, 2025 (Lavoiser Discussions)	
14:30-15:00	Nicola Marzari (EPFL, Switzerland)	1
	The electronic-structure genome of inorganic materials	
15:00-15:20	Sonia Conesa Boj (TU Delft, The Netherlands)	ı
	Machine Learning from the Large Hadron Collider to van der Waals Materials	
15:20-15:40	Chiara Zanardi (Ca´ Foscari University of Venice, Italy)	I
	How artificial intelligence can help in an unusual detection of ions in sweat by graphene	
15:40-16:20	oxide and hexacyanoferrate modified electrodes  Coffee Break / Poster Session / Exhibition	
16:20-16:40	Minh Tuan Dau (Université Côte d'Azur, CNRS, CRHEA, France)	
10.20-10.40	Towards data engineering and model selection in predictive regression of 2D materials properties	'
16:40-17:00	José-Hugo Garcia (ICN2, Spain) Equivariant Al-based models for accurate electronic Hamiltonians	I
17:00-17:15	Shubhojit Banerjee (UML, USA) Uncertainty-informed transferable deep learning potentials for simulating BeF2-LiF system	0
17:15-18:15	Round Table: Al for experimental and theoretical research	

High-Throughput Virtual Screening of Existing Organic Chromophores for Materials Discovery Artem Maevskiy (National University of Singapore, Singapore) Machine Learning for Accelerated Discovery of Superionic Solids  99:35-09:50  Aurelie Champagne (CNRS - ICNCB, France) Predicting Crystal Structures and Ionic Conductivity in Mixed-Halide Solid Electrolytes Using Machine Learning Potentials Janine George (CMD@BAM, Germany) Data-Driven Materials Design 10:10-10:25  Giovanni Vignale (IFIM, Singapore) Orbital-free density functional theory for periodic solids: Construction of the Pauli potential Amara Hakim (ONERA, France) Unlocking 3D Nanoparticle Shapes from 2D HRTEM images: classification and denoising at atomic resolution  10:40-11:35  Coffee Break / Poster session / Exhibition 11:35-11:55  Maria Fernandez-Serra (Stony Brook University, USA) ML-Density and energy optimized exchange and correlation functionals for density functional theory  Gian-Marco Rignanese (UCLouvain, Belgium) Response properties of inorganic materials from high-throughput density-functional perturbation theory and machine-learning 12:35-12:50  Gian-Marco Rignanese (UCLouvain, Belgium) Response properties of inorganic materials from high-throughput density-functional perturbation theory and machine-learning 12:35-12:50  Stephen Dale (IFIM, Singapore) Diagonalization without Diagonalization: A Direct Optimization Approach for Solid-State Density Functional Theory  Lunch  Lunch  Latis-14:30  Emigdio Chavez (Catalan Institute of Nanoscience and Nanotechnology, Spain) ML-driven Thermal Sensing Using FTIR Spectroscopy  Andy Paul Chen (Nanyang Technological University, Singapore) Crystal Site Disorder Analysis with Machine-Learned Atomic Potentials and Statistical Methods José Luis Montaño-Priede (Certro de Fisica de Materiales, Spain) Synergistic Integration of Bayesian Optimization and Advanced Simulation Tools for Plasmonic Performance Enhancement  Andreas Răder (Fraunhoffer Institute for Silicate Research ISC, Germany) OpenSemanticlab - Linke		Thursday April 10, 2025 (Plenary session)
